AutoCAD and AutoCAD LT have been used by contractors, architects, and engineers for over 30 years. It is primarily used by architects and engineers in design and drafting, and is also used for creating technical drawings, notes, construction documents, and marketing material. AutoCAD offers several tools for the analysis and visualization of 2D, 3D, and perspective views, as well as for 2D and 3D modeling. It also allows for 2D drafting, with features such as line, arc, and polyline drawing. 3D modeling tools include perspective, surface, and volume views, as well as creating volumes and surfaces, triangulation, and sections. AutoCAD supports the

creation and editing of GIS data, specifically various types of land and terrain maps, such as ortho, topo, contour, and vector. Key features of AutoCAD:

- Create topographic maps, contour lines, and vectors on your computer
- Design, visualize, and edit 2D and 3D models
- Create drawings, notes, and notes
- Create and modify text
- Make simple 2D and 3D drawings
- Work asynchronously, allowing multiple users to work simultaneously on the same drawing
- Automate drawing tasks and change behaviors
- Analyze drawings and views to simplify and standardize work
- Store, share, and manage complex project data in your own cloud
- Streamline the process of working with others using cloud-based collaboration and project management
- Build a working file repository within your CAD system, enabling for example, you to create and edit working files on the go
- Integrate with CAD and GIS systems
- Perform advanced 2D and 3D modeling
- Create orthographic views from any 3D model
- Use measured drawings in a workspace
- Perform 2D drafting with line, arc, and polyline drawing
- Perform 3D modeling
- Show line and surface detail
- View in a variety of orthographic (2D), perspective, and three-dimensional (3D) views
- Create blocks
- Draw curves, arcs, and parametric lines
- Scale drawing elements
- Use layers to organize elements and blocks
- Perform automatic dimensioning and placement of blocks
- Project plans and sections
- Draw

AutoCAD

Digital Prototyping- AutoCAD LT AutoCAD LT is used to create topographic and architectural models. AutoCAD LT also supports a visual scripting language, which allows the user to create scripts that automate repetitive tasks and convert 2D to 3D. Sample 3D application: Protégé 3D by M&R AutoCAD supports a number of

programming languages: AutoLISP, Visual LISP, VBA, .NET and ObjectARX. AutoCAD also provides command-line support for users to execute AutoCAD commands from the command line.

Built-in web services AutoCAD web services allow the users to interact with their drawing in a seamless manner. The web services can be queried using Visual LISP, Java Script or ASMX-based web services. AutoCAD RTN (Real-Time Notify) allows the developers to subscribe to AutoCAD events which can be accessed from any programming language. Third-party add-on components The

have a very simple TableViewController which displays a list of "things". The thing to be displayed is determined by the user. How can I use the height of the TableViewController so that the view below adjusts to the number of elements displayed? It is important that the "things" don't scroll, only the view below. A: Use this code for your UITableViewController.

```

MyTableViewController : UITableViewController @end #import
"MyTableViewController.h" @implementation

self.tableView.frame = frame; self.tableView.contentSize =
CGSizeMake(frame.size.width, frame.size.height);
self.tableView.rowHeight = UITableViewAutomaticDimension;
self.tableView.estimatedRowHeight = 64; } -
