See also: To use AutoCAD Torrent Download, a purchaser licenses a copy of AutoCAD or, alternatively, a "user license" entitles the user to use the software on one particular computer for the lifetime of the license. The user license enables the user to make use of the software as a desktop app running on the user's desktop or laptop computer, or as a cloud app running from a web browser. In either of the latter two cases, the user must have a paid subscription, typically referred to as a license, to the cloud service provider. The AutoCAD user license term can last from one year to indefinite duration. The user license, also called a subscription or license fee, is based on the software product, and the number of copies of the software installed on the user's computer. The purchaser, or the vendor of the software, is entitled to revoke the user license at any time. The vendor may include activation and deactivation instructions in the purchased software. The license and activation instructions provide the user with information about how to install and use AutoCAD. The user can also purchase software updates from Autodesk separately or in conjunction with the user license. If the user is a licensee of a free or open-source CAD program, the user license does not include the rights to use the software on a local or remote computer. Users of the open-source software are required to install and use the software through a network, typically a remote server, rather than on the user's own desktop or laptop computer. The users of open-source CAD software are typically hobbyists, students or others who are not authorized to install and use the software on a user's local computer. The AutoCAD logo (page 8) displays the year of AutoCAD version number in addition to the version number. The year also represents the time when Autodesk acquired Paracad (originally ParaCAD), the predecessor of AutoCAD. Since then, Autodesk has developed AutoCAD and released AutoCAD updates with a new version number each year. If the year of the version number is different from the year of the release, the version number has been changed. Table 1.
