What is AutoCAD? If you have been working as a CAD operator for some time, you would have probably been able to recall that when you first started out there were no applications that would automate the process of creating your drawings. As such, you needed to spend a lot of time creating your drawings, hand in hand with a CAD operator. As your CAD skills grew and you gained access to more sophisticated CAD software, you would be able to automate some of the more complex steps of drawing creation, but for the most part you would still need to spend a great deal of time working with a CAD operator. The idea of a "program that does all the drawing for you" was a very new concept when AutoCAD was released in 1982, however it soon became apparent that the time when CAD operators would spend all of their time creating the drawings was coming to an end. In time, engineers, architects, construction and other professionals found themselves not needing to have a CAD operator physically with them at all times while they were working. As a result, CAD operators were left with a choice to make - either become a CAD "automation" expert and learn how to automate the creation of drawings using a menu-driven feature set, or find a new career. To date, over three million CAD operators have chosen to become "automation experts" rather than find a new career. AutoCAD and other CAD applications like SolidWorks, Inventor, Solid Edge and others, are still being used in many different industries and environments. AutoCAD is now a commercial product that is one of the most used CAD applications in the world. As a result, many manufacturers of CAD software have developed applications that work in conjunction with AutoCAD. AutoCAD and the Workflow AutoCAD does not create drawings directly, but rather creates a virtual representation of a drawing. This "model" can then be handed over to a graphic designer who will "paint" the design. Once the model is completed, the CAD operator prints it out and the whole process repeats itself in a series of steps. The work of creating a drawing starts with the creation of a model, which is then converted to a technical drawing by a graphic designer. The designer uses the software's drawing tools to hand-draw the design, which is then converted to a vector image. Once the vector image is completed, it is handed

Lansdowne ferry to sail through Temple Bay The National Aquatics Centre was the focus for the community at the weekend. Organisers unveiled a large scale timepiece that will continue to give a valuable insight into the tides in the River Avon. The new public artwork was revealed at Temple Island, just off the Lansdowne Ferry. The sculpture is based on the tidal flow in the Avon and will give visitors and residents alike the chance to study the tides and river levels. It can be viewed from the riverside walkway and will be the perfect view for a picnic or a relaxing afternoon on the river. It is hoped the artwork will encourage people to learn more about the river's seasonal change. Colin Richardson, who helped organise the event said: "The National Aquatics Centre is a great venue and it was important for us to do something to celebrate the area and it's surrounding. "The sculpture will provide a great view for visitors and residents, who can learn more about the river." The sculpture is the culmination of five years of work by artist Sheila Clements, who has had her artwork, the Avon Suspension, displayed in London and Edinburgh.

Upload drawings directly from the cloud in CAD applications that support CAD in the cloud. Draw a sequence of line-based marks to quickly sketch over existing drawings for higher-fidelity reference and quick feedback. After saving a new file in AutoCAD, include custom metadata and automatically sync it to the cloud. Design Map and AutoShapes: Simplify your workflow and prevent errors by using a tool called Design Map. It's a drafting tool that creates a multi-colored map of your drawing area and highlights the geometric and visual elements you've used most recently. (video: 7:40 min.) You can now use the Design Map tool even in certain off-line scenarios. Create AutoShapes (bezier curves) that automatically follow the main axis of your drawing. Standardized axis controls to place and copy elements along an axis with just a few clicks. Work with the DesignMap; export it to other applications, like SketchUP, Google Sketchup, or VSCAD, to share your design intent and ideas. New enhancements to AutoCAD Video capabilities: Improvements to cadview – the video capture system. A completely new solution to improve performance of cadview and make your viewport responsive to your actions. Cadview now saves the last active viewpoint for later use. Improvements to video rendering. Cadview now uses optimized video file formats, saving bandwidth and storage requirements. Advanced video streaming. Cadview video streaming now maintains a specific view of your drawing area, even when you zoom or pan. Reduced file size. Cadview video streaming now produces smaller file sizes and remains responsive even when many files are opened at the same time. CadWeb improvements: Integrated CadWeb site provides an easy-to-access platform for sharing CAD files. CAD files can be uploaded and downloaded, previewed, edited, and shared with your colleagues. The CadWeb site now includes a secure, encrypted search capability for CAD files. You can now share CAD files directly in the CadWeb site from your system's Web

browser, without requiring a download. Integrated a new location for CAD share by right-clicking a link and selecting “Open in CAD Web.” Work group assignments now work more quickly.
