AutoCAD 2018 version 2.6 (2017) for Windows AutoCAD is used by architects, engineers, draftsmen, surveyors and many others to design buildings, plants, vehicles and other objects. AutoCAD is marketed as a tool for the creation of architectural, engineering and drafting drawings. AutoCAD is considered to be both a powerful and easy-to-use tool for drafting and design. Most of the company's profits come from its value-added services such as training, consulting and software development. All of the components in AutoCAD, except for the end user interface, are generated by the CAD software. The original AutoCAD 1.0 was released in 1983, and the original hardware was obsolete before it became available for sale. To run AutoCAD, a user typically must purchase a computer with a compatible video adapter (usually provided with AutoCAD). The user will also need to purchase AutoCAD's data files or purchase a licence for the online AutoCAD store. As a CAD program, AutoCAD is delivered as a set of computer files. In AutoCAD's early years, the only source of these files was from the AutoCAD package. Before AutoCAD version 5, the only other source of data files was from the former TrueVector package. Today, there are also a variety of ways to download AutoCAD data files. Contents AutoCAD is published by Autodesk Inc., with headquarters in San Rafael, California, USA. In 2012, the company had a workforce of more than 8,000 employees and had offices in over 20 countries.[4] AutoCAD is also available on personal computers, tablets, smart phones and the cloud.[5] The current product line-up for AutoCAD includes: AutoCAD LT: A version of AutoCAD for personal and small business use. AutoCAD Architecture: A version of AutoCAD for architects. AutoCAD Enterprise: A version of AutoCAD for professional CAD users. AutoCAD LT and AutoCAD Architecture were developed from AutoCAD 1.0. In November 2001, Autodesk released AutoCAD LT as a free download to MS Windows users. AutoCAD LT is also available as a virtual appliance with the same functionality as a physical Windows PC. AutoCAD Architecture is a licensed product that includes the basic features of AutoCAD and the

The ability to create and store information in tables and add a note field is provided by the application. AutoCAD and AutoCAD LT will save, retain and recall info stored in tables and allow tables to be shared via the internet. When creating information in the form of an image, the application saves the information as a graphic file and can be exported to many graphics formats.

Infographics such as graphs, pie charts, pie slices, choropleth maps, and bar charts can be exported as graphics files. See also 2015 in video games References External links AutoCAD: History, programming and consulting CADD VEX Engineering Inc

Payment cards and cards such as credit cards, gift cards, debit cards and prepaid cards are increasingly being used to make transactions in retail and service locations. While the term card generally includes any form of monetary value, some transaction cards may have no monetary value, and may serve solely as a loyalty, promotional, rewards or other type of incentive award program. In addition to monetary value, transaction cards include loyalty cards or rewards cards that allow consumers to purchase points or other types of redeemable awards for providing their credit card account number, or other identifying information. Retail establishments typically accept transaction cards as a means to reduce their purchase-related expenses. For example, establishments generally do not have to be concerned with purchasing transaction cards, counting out cash, or providing change or receiving cash back for transaction card transactions. Transaction cards also can reduce the time required for customers to provide account numbers and other information to complete the transaction. One type of transaction card is a transaction token card. Transaction token cards are typically not magnetic stripe cards, such as debit or credit cards. Rather, transaction token cards are typically embodied as a plastic card with some type of machine-readable technology attached to the card. Transaction token cards typically include a machine-readable technology, such as a bar code or magnetic strip, that can be read or magnetically recorded by a card reader device at the point-of-sale terminal. Typically, the transaction card is used in place of currency or credit. Some transaction token cards have monetary value associated with them, while others may simply act as a loyalty, promotional, rewards, or other type of incentive award program. Typically, transaction token cards are not made of metal or have a metallic appearance. Transaction token cards are typically either clear or transparent, with the exception of transparent plastic cards that are embedded with a machine-readable technology. Traditionally, a transaction card typically has an adhesive attached to the card to facilitate attachment of the transaction card to the surface to which the adhesive is attached. The adhesive is typically pressure sensitive, so when the adhesive is attached to the surface, it holds the transaction card securely to the surface until the adhesive is removed. In many instances, the adhesive may be easily removed from the surface. For example, paper or other materials such as sandpaper can be used to remove the adhesive from a surface. Often, a transaction card will have an adhesive that is attached to the surface of the transaction card at a location that does not fully cover the card, leaving a border around the card. If the
