TrainerEngine is a web-based application for creating and managing Training or Course Management programs, that allows you to create online Training or Course Management. In addition to that, the program can manage Trainer/Course records and information. You can also assign the relevant courses to individuals, groups, or both. Once assigned, it is possible to set up course rules. The software also allows you to add or edit training courses. You can view and print schedules. This version of TrainerEngine contains the following features:

- Add training or course with instructor and attendee information
- View and print the course schedule
- Assign the courses to users, groups, or both
- Edit the course details
- Add or delete course rules and set course times
- View and print the details of the course
- Add or delete an instructor
- Assign the instructors to a course
- Set up employee notifications to the courses
- Assign the instructor to a course
- View the status of the course for each user
- Create an audit trail
- Inventory the courses and the instructors
- Send mass notifications to all the users
- Manage the reports and export the data to PDF, Excel, XLS, XLSX, PDF, TXT and CSV
- View and print all the course details
- Import or export the records from CSV or TXT files
- Manage all the courses with instructor and attendee information
- Export the records to XML
- Backup and Restore the records
- Create backup and restore schedules
- Exports records to PDF, XLS, XLSX and TXT
- Import records from PDF, XLS, XLSX, and TXT
- Create backup and restore schedules
- Views and prints the audit trail reports
- Create audit trail
- Manages all the instructor and attendee information
- Edit all the instructor and attendee information
- Import and Export the records to CSV and TXT
- Restore all the records
- Create a backup and restore schedules
- Backup and restore the instructor and attendee information
- Create and view a complete audit trail
- Views and prints the course and instructor information
- Views and prints the course details
- Create or edit all the course rules
- Assign the instructors to the course
- Set the course rules
- Create an audit trail
- Add or edit courses
- View and print the course schedule
- View and

You need to look at the information you are trying to store in a database and decide how you are going to represent it. This can be in a database table, a linked list or in whatever format you require. This is a very broad question but the basic principle you are looking at is to decide whether you want to use some kind of database (probably SQL Server) or

---

write the data to a file. In the first case you might need to design a database schema, but in the second you just need to write the data in the appropriate format. For instance, in the latter case you could use a spreadsheet, or you could use an XML file, or you could use a proprietary database such as dBASE or Access or you could use a database-specific format such as SQL Server's FILESTREAM.

TrainPeople ERP, the leading on-demand, cloud-based time tracking solution, is set to disrupt the time tracking market, with many features that are much simpler and more efficient to use than traditional time tracking software. TrainPeople has been developed to make managing employees' time tracking as simple as possible. The software allows you to manage employees, projects, client billing, departments and more, with one interface. This allows for easy navigation and makes it easy for you to visualize how much time you spend and where you spend it, allowing you to see your processes in a new light. TrainPeople has been designed to help small and medium-sized companies across a range of industries, like construction and retail, improve their productivity and reduce costs. Features of TrainPeople include: - A full-featured online time tracking solution - Built in project management - Invoicing & billing - Data export to Excel - Customizable graphs - Free upgrades - Support over 15 languages - Free 30-day trial (paid-for after) - Team Perks that promote teamwork - Access to our community So what are you waiting for? Order today! This app is ad supported. TrainPeople ERP is a professional time tracking and project management software solution. With over 200,000 downloads on Google Play, TrainPeople is already proving its popularity in the market. The TeamPerks function enables the user to set up easy rewards and promotional schemes. Being cloud based means you don't need to worry about upgrading. You can manage your employees, your project, invoicing, billing, change their status, and a host of other features. This is a full featured system designed to meet the needs of small and medium-sized companies. Trainpeople, the leading Time Tracking software for small and medium businesses, is now available for iPhone, iPad and Android tablets. Trainpeople time tracking software for iOS is now available as a free download from the Apple App Store and the Android Market. The Trainpeople iPhone App will allow you to manage your time more efficiently, creating a project and logging time spent in tasks. You can now view your timesheet in real time as well as generating invoices. Trainpeople offers the ability to automatically export data to Microsoft Excel for use in MS Project. More than 65,000 customers choose TrainPeople time tracking software for Android as their time tracking software. Approximately 75% of Android users own

The deployment of enterprise-level training environments is challenging, and most trainers still rely on clumsy, static printed materials and CDs. The traditional approach is expensive, slow and not very reliable. Training Manager (TM) 2012 provides a fast, cost-effective and reliable solution for the delivery of sophisticated training content and high-end multimedia experiences. TM delivers a consistent, cost-effective and highly scalable solution for delivering training content and multimedia experiences. It enables you to deploy multiple training content on single or multiple machines, generate cost estimates, and control and track the impact of the training solutions. A scalable content management system, TM provides an intuitive and highly flexible design that is easy to learn and implement. With this advanced content management system, TM can be easily deployed on single or multiple machines. It can also be easily modified for your specific training

---

requirements, making TM ideal for a wide variety of training solutions. TM provides a variety of features and functionality to help you manage and track the impact of your training solution. TM also enables you to manage and track, employee, training effectiveness, prevent non-attendance, provide on-line real time training reporting, and maintain an audit trail.
