It's not easy to find a tool that provides numerous alternatives to quickly check whether a given regular expression matches a given string or a set of strings. Ideally, such a tool will feature a clear and straightforward interface and a command-line option for running the test. It also has to be lightweight and intuitive to use. Luckily, Sharp Regex Tester does not fail on any of those requirements. The interface is simple and straightforward, it's built with an intuitive design, and the software has an amazing number of functionality options. Installing and configuring the software The installation

process is quick, it's straightforward, and its start button is immediately visible after the main window is loaded. The setup procedure requires just two simple steps, and you don't have to install .NET Framework. We liked the fact that Sharp Regex Tester is customizable and that it's possible to change certain options and settings to the user's preferences. For example, the word list size and the display font can be configured. You can also add comments about the set of patterns, edit the code manually, or copy a portion of the regular expression pattern to the clipboard to reuse it later. Looking for the latest updates? Then simply check for updates in the tool's configuration.

Checking regular expressions The

software's typical verification process involves: selecting the desired regular expression pattern, setting the test input data, and pressing the Start button. A few seconds later, the test results are displayed in a separate window, which shows all matches and groups.

Additionally, the source code of the regular expression pattern is displayed in the same window. Sometimes, the result can be saved to the clipboard and pasted elsewhere. Additionally, one can use the global Copy key or right-click on a selected text to copy its content to the clipboard. Nevertheless, the software doesn't implement a button for running the test from the main window, which can be inconvenient at times. Verdict

Sharp Regex Tester offers a fast and effective method to run regular expression matches. Its user-friendly interface doesn't have many more options than a standard regular expression tester, but it's easy to use. It's a pity that there's no system tray icon, but the software supports system tray. Vuze is one of the best free BitTorrent clients for Windows. It is used by millions of people every day.
