History The first version of AutoCAD, AutoCAD R12, was introduced on December 6, 1982. Development of AutoCAD began when John Walker founded Autodesk in 1981. After hearing in 1979 about a new graphics interface for the Hewlett-Packard HP 3000, he developed software tools that would eventually become AutoCAD. In 1984, Autodesk released the first version of AutoCAD, AutoCAD R1, on MS-DOS and Apple II computers. The software that supports the most complex engineering drawings, including architectural and mechanical engineering, has been continuously improved and expanded over time. Version R2 was released in October 1985, which included some significant changes from previous versions. Version R3 was released in 1986. With the addition of two-dimensional, three-dimensional and graphic display capabilities, its features were comparable to commercial CAD packages. In 1987, Autodesk introduced an updated version of AutoCAD named AutoCAD 2. AutoCAD R4 was released in 1988, along with AutoCAD for Macintosh, a first for the company. Version R4 offered programming tools for programmers and 3D for designers. This version marked a milestone in the company's history because it introduced a new technology that is still in use today, the ability to share and collaborate on CAD files. At that time, CAD software was only available on mainframe computers, which is why AutoCAD R4 had to share files with other mainframe computers. With AutoCAD, a designer could use a mouse and work on a laptop or desktop computer. This ability to edit the same file on different computers and platforms without changing the file content saved the cost of a mainframe and allowed for easier and faster collaboration between designers. Types of files There are two types of file formats used by AutoCAD: native and external. AutoCAD native files are files that are not saved in an external file format, which means they cannot be opened and viewed in other CAD applications. A native file is stored directly in the program's file structure, and can be viewed in the original application or in any other application that is capable of opening native file formats. An external file is an AutoCAD file that is saved in a file format other than the native file format. For example, an external file is a CAD file that is saved in a format readable by a desktop CAD application. If a CAD program is used to create

Adobe Illustrator (Illustrator CS4 onwards), Adobe Photoshop (from version CS5 onwards) and InDesign (with update from version CS5 onwards) are other computer graphics design software programs that can export, convert, manipulate and import drawings. They can also perform some of the same functions as AutoCAD. Microsoft Office AutoCAD has a variety of features similar to Microsoft Excel. For example, it includes both worksheet tabs and separate application windows for data and

drawing/layout. AutoCAD can save a drawing (AAC), view drawings in a browser window, convert data from one type of drawing to another, and add annotation to drawings. AutoCAD also includes the ability to create graphical reports, do database access, and define its own macros. AutoCAD also has features that are unique to AutoCAD, such as the ability to import drawings into "AutoCAD Lite" and convert the drawings to a different platform, as well as features such as spline editing, overhangs and custom dimension overrides. AutoCAD can also provide basic CAD assistance, such as using named views to create functions or a customized drawing to create a new drawing template. Destiny 2 – Shadowkeep raid A week after I finished The Taken King and I hit level cap, I decided to raid Shadowkeep. My favorite place in the game and Destiny 2 raid. So I had to do it, and for the first time ever – I managed to wipe the place, a lot. Shadowkeep itself was a pain. On purpose. All the enemies were a bit too powerful, they moved slower than the level 20 content and they had a solid amount of damage. There were no nerfs or cooldowns, only buffs. I was forced to play in a certain manner, I had to kill them all in one shot, or forget about the raid. On one hand I was glad I was so slow, because it would mean I was getting decent rewards. I started the raid with a Scorch and a Powerleveling – after the first five minutes I had them both, and could 5b5f913d15
