AutoCAD's computer-aided drafting (CAD) functionality allows users to design three-dimensional models for the purposes of engineering, architectural, and artistic design. The program also supports 2D and 3D printing, as well as computer-aided manufacturing (CAM). The latest release of AutoCAD 2020 introduced new functionality such as the ability to run content from the cloud and make iOS and Android apps. Development of AutoCAD is closely tied to Autodesk's other AutoCAD software products. A separate software suite of computer-aided design tools is available for architecture, engineering, and mechanical design. Contents show] As of 2019, AutoCAD 2020 is the current version. The next release, 2021, is expected to be available sometime in 2020. History Edit The AutoCAD name originated from an Autocad, a CAD program first created by Cadent Systems in 1976. At the time, Autocad was a very early competitor to the best-known CAD program at the time, DASYCAD (later renamed Solidworks), developed by Dassault Systèmes (now a major player in the 3D modeling market). Autodesk began as a software company, and as such had to deal with its customers' often contradictory needs for a desktop CAD application. In 1982, the company developed the first Autocad app to run on an IBM PC with an internal graphics card, based on earlier programs that sold for several hundred dollars. The app was released in December 1982. It was originally intended to run only on the Compaq Deskpro and the Compaq Deskpro II. The application was able to run on the Sinclair ZX81 and ZX Spectrum computers, as well as the Apple II. The AutoCAD 1.0 user manual was 6.5 kilobytes (KB) in size. In 1983, AutoCAD's share of the 3D CAD market was only a few percent. However, AutoCAD did make its way into industries outside the CAD world, such as the auto industry, where Autocad eventually came to dominate the market by the end of the 20th century. A few years after AutoCAD was introduced, a new cad program from Intergraph (Solid Edge) entered the market, but Autocad quickly regained its dominance with the introduction of a new version (AutoCAD 2.0) in 1985, which soon came to dominate the CAD

The class of 2011/2012 is already well documented and celebrated; so with the next class, the class of 2012/13, the youth system comes to the fore. And it is not hard to see why. Not only did City start the season by winning the league for the first time since 1972 (and for the first time as a public limited company), but they also reached the Europa League final. They lost to Milan at the Etihad Stadium in that game, but did beat the Rossoneri 2-0 at the San Siro to reach the final, and despite losing in the final, the squad is still some of the best young talent from the last five years. There are a number of big names in the last batch. Bernardo Silva, of course, is already a key figure in the first team after a number of stunning performances in the latter half of last season. Similarly exciting is the rise of Samir Nasri. Nasri made his first team debut in December of 2014, as City were struggling to win games at the wrong end of the table. That Nasri had been the subject of massive speculation about a move back to Arsenal was no excuse for City to leave their second highest earner out of the team, especially when he was already established. Nasri has since gone on to become a key player, both in the side and on the international stage. He scored his first international goal in November 2015 and then scored a stoppage time winner against Russia in the Euro 2016 qualifiers to send the hosts through. There's also Aleksandar Kolarov, who has played a big role in City's recent surge. Despite not having featured much last season, it seems Kolarov has been a key figure for the club over the summer, helping the team ca3bfb1094

"But with all the data that we have now, we know it's important for all of us to take a very serious look at what are the chemicals that we're exposed to, and what are the chemicals that we need to keep out of our bodies?" Oceana maintains a list of over 2,000 single-use plastic products that are banned or restricted around the world. When I ask Phil what his favorite product is, he thinks for a minute, then says he has two. "Number one would be food bags," he says. "They're so easy to reuse, and you don't need to even wash them. If you just throw them in the wash, that's enough." He rattles off a list of products including pill bottles, condom wrappers, and food containers — in no particular order. "But number two, and I'm actually struggling with this one," he says. "Coffee filters." Phil says that, aside from a handful of things, he's found the most success using cloth bags — but these are often difficult to find. "But I've also had great success with a company called Yes To," he says. "They make some of the most durable bags that are super easy to clean." Phil has taught himself to stop using plastic cups. "I don't buy those anymore," he says. "I'll use a paper cup and cut it up." He also suggests not using plastic plates, as doing so can cause lead to leach into food, making it unsafe to eat. (Studies vary widely in the amount of lead in food in a plastic plate versus a glass one.) "There's a real importance to being educated," Phil says. "If you're not
