Acronym Acronym stands for Auto Computer-Aided Design. This acronym was used at the start of AutoCAD's original release to indicate that the initial release would make use of software which had been developed at Autodesk, but which had not yet reached the release stage. The name AutoCAD is an acronym for Auto Computer-Aided Design. History AutoCAD was first released in December 1982 and was the first in a series of products that were introduced by Autodesk under the brand name "AutoCAD". Although the first release of AutoCAD was on a fixed-price contract basis, Autodesk also offered the product as a perpetual license. The first AutoCAD release was developed in a short period of time at a time when most of the technology and capabilities were still being defined, and it was therefore difficult to determine if it met any minimum requirements. It was the first release to support the use of floating-point numbers, although integer-only versions had been available since 1981. Although floating-point numbers were not new, they were considered revolutionary at the time, and AutoCAD would not be ported to other platforms until 1987. In its first incarnation, AutoCAD was only available in the AutoCAD Drawing module, with a special set of commands for drawing straight lines, rectangles and circles, and only supported one scale factor for drawing. Additional drawing features were added to the AutoCAD Application Programmer's Interface (API) in subsequent releases. The main difference between the first release of AutoCAD and other commercial CAD programs at the time was that the software was written in assembler language and was dedicated to desktop operation. Many competing CAD programs were written in FORTRAN or Lisp, or implemented in C or C++. An early version of AutoCAD was used by George Bush as a blue-print for the construction of the World War II aircraft carrier, USS Hornet, but this version of the software did not support the use of floating-point numbers and the program did not include basic geometric operations like Boolean operations or calculating line lengths. Early adopters of AutoCAD included Dr. Robert Myers, who used the software on a Macintosh computer to design the wing ribs of the Lockheed U-2 spy plane. (Myers' AutoCAD files were stored on a magnetic tape and his drawings were then transferred to a cathode ray tube (CRT) plot

Filename Extension AutoCAD supports extensions to its filename conventions for the most common input file extensions. For example, \*.dxf files have the.dxf extension while \*.dbf files have the.dbf extension. Other extensions include: DWG DWG stands for Digital Wax (a portmanteau of the words 'digital' and 'drawing' or 'drafting'), as the draftsman was the only person in the company with this set of initials. For example, a drawing named "Building\_v01.dwg" would be called a digital or draft version of the "Building\_v01.dwg" drawing. "v01" is an abbreviation for "version one". DD DD is for Drafting Department, or Drawings Department. These files are generally used by the Drafting Department to specify the specifications of a building. DFF DFF is used to specify non-drawn items, such as specifications for installation of equipment, such as pipe. DGN DGN is used for a collection of related drawings that may be used for a planning project or for a number of different drawing sets. DGNGL DGNGL is used for a collection of related drawings that may be used for a project that includes highways, railways, canals, etc. DGN\_EXT DGN\_EXT is used for drawings that are part of a project that may have several different phases, some of which are multi-year. DGN\_XLATE DGN\_XLATE is used for drawings that are part of a project that may have several different phases, some of which are multi-year. DGN\_MIRROR DGN\_MIRROR is used for a design that has been built to plan, and is being prepared for construction. DGN\_POP DGN\_POP is used for drawings that are part of a project that may have several different phases, some of which are multi-year. DGN\_RANDOM DGN\_RANDOM is used for a project that has not yet been identified. DGN\_RS DGN\_RS is used for the most commonly used numbering system in the world. The number indicates the year of the edition of the standard. RS is the initials of the number. DGN\_TP DGN\_TP is used for a collection of related drawings that may be used for a project that involves work ca3bfb1094
