XOR is an XML-based file format that stores annotations to documents (including drawings, graphs, tables, lists, etc.) and can be used to transfer information between two documents. DGN is the AutoCAD (computer-aided design) graph-based network format. It can also be used to exchange model information. This can be done via the File > Exchange option in AutoCAD, or by opening and saving DXF and DGN files using the Windows Notepad editor. The AutoCAD database stores details such as blocks, data, dimensions, calls, constraints, feature families, entities, groups, layouts, layers, lines, symbols, and text. Additionally, there is a separate database that stores non-catalogable information, including drawing text, graphics, drawings, and annotations. When drawing information is exchanged with other applications, it is stored in the model database. Autodesk Exchange Apps are installed as plug-ins to AutoCAD. These apps can be used for customizing AutoCAD and are accessible via File > Exchange. Usage AutoCAD has been implemented in a number of computer languages, including AutoLISP, Visual LISP, VBA, C++, .NET and ObjectARX. LISP AutoLISP is a programming language that is used to build AutoCAD plugins. AutoLISP is used to write scripts to control the AutoCAD graphics system and manipulate AutoCAD itself. To write code, AutoLISP combines objects into a function called an AutoLISP macro. AutoLISP allows for the creation of programs to create AutoCAD drawings, and to convert external file formats into AutoCAD DXF, DGN and PDF files. AutoLISP is included as part of the new AutoCAD 2015 release. Visual LISP Visual LISP is a form of LISP that allows for the customization of the program and interaction with objects ca3bfb1094
