read that this was not something you would run in
a live version, and it is not. Characterization of
mediators released by thrombin-activated
platelets from patients with platelet
thrombasthenia. The activation of platelets by
thrombin resulted in the release of a thrombin-like
and a vasoactive amine, likely
5-hydroxytryptamine (5-HT) and thromboxane A2
(TXA2), respectively. The latter has been
proposed to play a role in the development of
circulatory disturbances during the pathogenesis
of thrombocytopenic purpura. The response of

platelets from patients with type I (GT-1) and type II (GT-II) thrombasthenia to both agonists was evaluated. Platelets from GT-1 patients behaved in the same way as those of controls, namely their aggregation and TXA2 release were strongly inhibited by aspirin, while the release of 5-HT was more sensitive to indomethacin. GT-II platelets, however, responded to both agonists by aggregating and releasing TXA2. Moreover, butyrate inhibited this thrombin-induced release of TXA2 in a dose-dependent fashion. On the other hand, 5-HT release was not inhibited. These results support the role of TXA2 as a potent mediator in platelet aggregation and imply that mechanisms which prevent TXA2 release are involved in the pathogenesis of GT-II.

Q: Partially deserializing JSON and converting to a Dictionary
I'd like to check the state of the inbound SOAP responses based on their SOAP body's status. In this case, I'm dealing with an implementation error. The error message describes the problem:
HTTP/1.0 cc13bf012
