GIMP GIMP, an open source alternative to Photoshop, is developed and maintained by volunteers around the world. GIMP is designed for the artist, professional photographer, and webmaster. Although GIMP has some of Photoshop's features, it allows users to step through each step of the process, as a paint program does. GIMP is less

command-line functionality as Photoshop, but it is easier for those who prefer to use the mouse. Adobe Photoshop provides basic file handling tools for enabling you to open, close and edit images as well as conversion of file formats. Adobe Photoshop has a basic file browser that allows for opening, changing, and saving of files. Adobe Photoshop requires you to have a license so you can use its features, but it's important to note that the license is per machine. It is important that you get a valid license. Of course, you can use any image editor that you like but Photoshop has features that make it better suited for the

professional photographer and for the person who needs to understand how to edit images properly. For example, Adobe Photoshop allows you to change the image size without affecting the aspect ratio of the file and it allows you to invert colors.

Q: DatagramPacket.receive() produces weird value I am debugging some socket code in Android with the help of Wireshark. I realized a strange behavior. I am sending two bytes. Two characters A and B. I am using two channels: Radio and Text. The wireless receiver is: BC + 10 + = Bc + 10 + .

```
    DatagramPacket packet = new
    DatagramPacket(byteFromSocket.t
    oByteArray(),
    bytesFromSocket.size()); byte[]
    bytes = new
    byte[bytesFromSocket.size()];
    ByteBuffer buffer =
```

---

```
ByteBuffer.wrap(bytes);
buffer.put(byteFromSocket);
buffer.position(0);
datagramPacket.setData(buffer);
datagramPacket.receive(); System.
out.println("datagramPacket.receive
e() return value:" +
datagramPacket.receive(bytes));
```

After a socket.receive() I have the received hex value: 0x6c656466 0x75 6c 6c 6f. My packet is correct. I have received the byte: AB, but the value of the receive method is: 0x72 0x65 0x6c 0x6c 0x6f = Bc. Can someone explain why? A: I'm going to answer my own question. I was wrong. The correct code is:

```
datagramPacket.setData(bytes); I
```

thought the method first receives the data and sets it to the buffer. In this way, when the channel is occupied by a text, the data which was received are saved and a new data packet is transmitted to the receiver. The solution was simple.

(AVA) Programme, we conducted a survey on the process of medicine manufacturing in India. The purpose of this paper is to describe the sectors of medicine manufacturing that are prevalent in India. A survey was conducted in the three states of Northern India, Central India and Southern India. Key informants or respondents of different roles in the process of medicines manufacturing were approached. The questionnaires were prepared in an ad-hoc format using pre-tested descriptive variables to measure the levels of various parameters. The pharmaceutical sector in India is made up of three

---

mutually exclusive sectors: BPCI sector, the unregistered sector and the registered sector. The process in BPCI sector is simple and informal, and in the unregistered sector, the process is serious and formal. The drug manufacturing process in Southern India, on the contrary, is a mix of the other two types. The situation in the unregistered sector of medicine manufacturing in India is not uniform across the country. The unregistered sector exists as a complementary arm to the registered sector, and the unregistered sector offers a cheaper and more competitive product to the registered sector.
