Furthermore, it is possible to connect the Zygote of each user with other Zygotes. If two Zygotes want to communicate with each other, they must first get the connection information. This is necessary to prevent an attacker from accessing the private data of another user. BrothersoftEditor: If a data manager controls and processes the data centrally, it is worth paying for it. It is not only easier to access and process data, it is also more secure. BrothersoftEditor: By default, Zygote creates an entry in the user account's file history at the last time it was used. In the future, you can edit the data or use them without Zygote. This is explained under the Delete button. You can use the Delete button to delete the information. If a user is not connected to the Internet, the Zygote will create its latest data at the moment of last connection.
