AutoLISP is a language based on LISP that runs on top of the AutoLISP engine in AutoCAD. AutoLISP is both used to write add-ons and extend AutoCAD. Visual LISP is an object-oriented scripting language, which enables the creation of graphical and computational macros. In 2007, AutoLISP and Visual LISP were deprecated, and replaced with VBA. VBA can be used for tasks such as adding fields, work orders, and tools, as well as automating various tasks in AutoCAD. VBA is included in AutoCAD. Visual Basic is a general-purpose development environment built on the Microsoft Visual C++ .NET Framework. It is available for all Microsoft Windows operating systems. A VBA add-on called Visual LISP can be used to create macros. However, Visual LISP is generally not used for automating. .NET is used to connect to external systems using COM and .NET. .NET was released for AutoCAD in 2004 and is available for Windows operating systems. In 2009, .NET was deprecated in favor of ObjectARX. ObjectARX uses .NET as a scripting language. It also uses COM for connecting to external systems. History AutoCAD started in the 1970s as a drawing program for the HP 5150 Workstation. Originally it was created by George Beeler as Autodesk I, and then Autodesk II. Autodesk wrote Autocad for the MS-DOS operating system and renamed it Autodesk AutoCAD. With the release of AutoCAD LT in 1997, Autodesk released the source code for AutoCAD under the GNU General Public License. Autodesk continued to work on AutoCAD and released the first release of AutoCAD 2004 for the Windows operating system. This version included many new features. The next release, AutoCAD 2005, included a new ribbon, object snaps, and the ability to view CAD files in Google Earth.
