An overview of the language and its high-level concepts and procedures was given in D.2.5. The data type system was described in D.2.6. The indexing schemes introduced in the previous sections of the chapter were discussed in D.2.7. An overview of the different structures was given in D.2.8, and relational calculus was discussed in D.2.9. The idea of the relational model and the nature of the different relations was discussed in D.2.10. The declarative query language introduced in Section D.2.11, the SQL queries supported by some major DBMSes and the ability of these DBMSes to execute these queries was discussed in D.2.12. The capabilities of the SQL-99 standard in the areas of query optimization, data modification, database metadata, and database security were discussed in D.2.13. The main concepts of the object-relational model introduced in the earlier section of this chapter were discussed in D.2.14. Some of the issues related to the implementation of the object-relational paradigm were discussed in D.2.15. Specialised Database Systems: Design, Implementation and Management Databases: Theory and Practice (D&ADB) Evolution of Databases: An Introduction to Database Systems Information As the World Computer Information Science Handbook: Databases Operating Systems, Programming, and Tools Operating Systems Design and Implementation Operating System Concepts Programming Languages in Databases Relational Databases and Network Management The Implementation of Database Systems Use of Procedural Language in the Database Area Transact-SQL Visual Foxpro 7 User's Guide and Tutorial We are open for any type of question related to our courses.. You are welcome to provide suggestions for course improvements. Any new guidelines for course evaluation should be added to Course evaluation Guidelines. or to CSE guidelines page.
