This paper provides a brief history of U.S. reform of its health system. From 1936 to 1949, the United States' dominant health system was a combination of public and private providers in a system that practiced "Cadillac" medicine. In 1949, President Truman declared the United States committed to a single-payer system of universal health insurance, which replaced the era of "Cadillac" medicine as the U.S. national health policy. An essential component of the U.S. reform was a collective effort to restructure the health market, and this served to reduce the influence of powerful segments of the medical profession as well as slow the growth of private medical spending. In 1965, the major health care sector providers, private insurance companies, and the federal government joined forces in the landmark legislation that passed as the National Health, Education, and Welfare Act. This legislation codified the combination of private and public insurance programs and created Medicare for people 65 and older and Medicaid for the poor. The major goal of the 1965 legislation was to achieve broad and consistent access to services, and it accomplished that major goal in the U.S. by the early 1970s. In 1971, a second major health reform bill, the Health Security Act, extended Medicare coverage to Americans under age 65 and also included a precursor to Medicaid. In part because of the fear that they were losing their ability to set the overall direction of health policy, the major health care institutions in the U.S. in the late 1970s began to launch aggressive efforts to redo the Medicare and Medicaid programs. Fearing a costly health security system that would control its spending and force it to pay higher taxes, Congress passed major changes to Medicare and Medicaid in the mid-1980s. After studying the results, it became clear that, although these changes have led to major cost savings for Medicare and to coverage expansion in Medicaid, they also led to significant, previously unforeseen increases in outlays. The major health care institutions in the U.S. responded to these changes by lobbying hard for reforms that would allow them to prevent Medicaid from absorbing the cost of caring for the millions of uninsured Americans.Q: How to save multiple dataframes in a file using a loop? I would like to save multiple
