Northern blot analysis of RNA from normal rat tissues and from isolated mast cells, basophils, and bone marrow mast cells revealed a pattern of mRNA expression that was distinct from that seen with normal human and mouse tissues. Rat lung mRNA expressed high levels of transcripts for two distinct elastase genes and one chymase gene that gave rise to poly(A) RNAs of 2.6, 1.9, and 1.1 kilobases. In the lung, the sequences giving rise to the 2.6- and 1.9-kilobase RNAs were more highly expressed in lung lavage or peripheral than in peribronchial cells, suggesting that the cells that produce these mRNAs are inflammatory cells, and peripheral cells may be involved in the in situ synthesis of the 2.6- and 1.9-kilobase RNAs. Other tissues, including heart, aorta, spleen, and stomach, contained RNAs of 3.3, 3.5, 4.5, and 4.9 kilobases, that hybridized to rat mast cell chymases cDNAs. has been created and could therefore have been created by the person accused of the crime, and it is usually impossible to determine its

entertained themselves, there were so many options available that it was easy to find something better to do. That's where I was - a product of the internet by the age of fourteen, I could find anything I wanted to see on the Web and even some TV programming I could access whenever. Given that, I don't really remember when I became aware of Flash Gordon. But I was pleased to notice that unlike the other kids who were better at playing Virtual Worlds than reading my School Library books, I'd managed to travel backward in time and watch an episode of Flash Gordon first. It took me a while to recognize that this wasn't a game-play consequence of the Flash Gordon virtual-world experience. I'd actually just run across a similar reference in the BBC's story review published on 17 October 1995. The surprising thing about running across this Flash Gordon review is that it included no less than nine references to the Flash Gordon films. This amazed me because the CGI/animated sequel to the movie, Flash Gordon: The Great Mac 10, wasn't even out yet. The most recent film, Flash Gordon: Legacy Of The Wizard, was released in 1996. I didn't realize what I was looking at until a year later when I purchased a Flash Gordon comic book in the local comic shop. With the old movie and comics on my mind, I decided to visit the Land of the Lost while I looked for the Beltway in Major Blake's office. I wasn't sure what to expect other than the image of the Safari Suite of the title and its title card. The Land of the Lost was no doubt first used on the original series of the old TV series where the main character was a scientist named Professor Scott Langley. It started as a World War II experiment and later appeared in a "futuristic" edition depicting an Earth that had been conquered by aliens. I was disappointed to find that the RetroHelix Land of the Lost in The Star Canyons world was more like a high-tech dungeon

than a genuine nostalgia or fantasy world. Since my in-world experience
