=== Overview The program sends a "plug & play" command to your dslr. DSLR Timer is, as the name says, a timer for your camera. It can be configured to take photos automatically at certain intervals. The interval time can be configured on the computer program for it to take photos every 10, 20, 30, 40, 60 minutes... Just to name a few possibilities. The program has a special function called Interval Timer. It can do intervals of 1 second, 5 seconds, 10 seconds, 30 seconds, 1 minute, 5 minutes and 10 minutes. The interval can be changed from the program. The program has a special function called Select Timer. This allows you to setup a timer to take one photo from a series of photos. When the timer starts the computer program sends a command to the camera via the serial port. After the photo is taken the program sends another command to the camera. Repeat this process for a certain number of photos. This is really cool for taking multi-starry photos. The program has a special function called Time Lapse. If set to "Start on specific Timer" the program can take a series of photos to the preset interval. The images are automatically deleted when the interval is finished. Notices: === Works with most digital cameras. Copyright: === ============================= This application is released under the GNU General Public License version 2. The file LGPL.txt was written by me. Unusual usages === 1. Use for long exposure with pixelchrono? No, you must use other programs to get the same effect. 2. Use for multiple continuous long exposures in one series? No, of course not. 3. Use for time lapse photos? Yes. 4. Use for additional long exposure control for the camera connected to a DSI model? No, of course not. 5. Use for time interval of a certain interval (auto-lock) of your camera? No, this program is also not intended for this purpose. 6. Use for example with telescopes where you may want to change position in your telescope. Yes, you can use the option "start on specific timer" to make time-lapse photos with the specified interval. 7. Use for example for long time exposure? No.

What's New in the DSLR Timer?

- Variable resolution: up to 720p (16:9) for single shots and up to Full HD (1920x1080) for multiple images - Fixed resolution: 1920x1080 - Exposure times from 0.1 to 600 seconds - Programs to delay a single shot and a series of shots with a defined interval - Fully automated (even camera is connected to network or to DSLR Timer's PC) - You can move the automatic sequence on the camera (should be possible on the Nikon D3000 with D5100, D7000, D3100 and D700 as well) Camera Scheduler works with digital cameras with a shutter release pin (trigger button) such as Canon EOS-1DS Mark II, Nikon D3s, Nikon D3, Nikon D5000, Nikon D7000, Nikon D7000, Nikon D7100, Nikon D7200, Nikon D3200, Nikon D5100, Nikon D5500, Nikon D5000, Nikon D5600, Nikon D5200, Nikon D6500, Nikon D610, Nikon D70, Nikon D800 and the new Nikon D810. Camera Scheduler is an easy-to-use application that lets you take scheduled pictures or video clips using your camera. The program provides a simple way to schedule an empty picture to the camera with a specific time from a preset date and time by the date, and a random interval by the date. Also, you can set the interval of a schedule for a single shot. Also, you can set the interval of a schedule for a series of shots with a defined interval, for example, "0.5 sec" or "2 sec" or "3 sec". Also, you can set the interval of a schedule for a series of shots with a defined interval and a preset picture number by the date, and a random interval by the date. You can set the release time and picture number on your camera by the "Camera Scheduler Settings" window. It will allow you to delete and edit an empty picture in the camera while it is set as the scheduled image.Elder Scrolls V: Skyrim patch 1.3 is now available from Steam. The patch notes are as follows: General: Fixed multiple issues with hair physics, such as hair not properly appearing in the bathroom or mirror.
